# HIPREX™

## Effective relief from Urinary Tract Infections.

*Helps eliminate  
the bacteria which cause  
Urinary Tract Infections.*

## What is Urinary Tract Infection (UTI)?

Urinary Tract Infection refers to infection anywhere within the urinary system.

A UTI can range from an infection of the bladder to an infection of the kidney.

Bladder infection, also called cystitis, is the most common type of UTI.

In cystitis, the bladder lining becomes raw and inflamed

## What causes a UTI?

A UTI is most commonly caused by bacteria.

## What are the symptoms of a UTI?

Common symptoms include:

- Burning or painful feeling when urinating
- Feeling an urge to urinate urgently, but being unable to or only passing a few drops

## Who is at risk of UTI?

UTI affects women, men and children.

- Women have a 1 in 2 chance of a UTI in their lifetime
- Nearly 1 in 3 women have a UTI needing treatment before the age of 24 years
- Men have a 1 in 20 chance of a UTI in their lifetime
- Both men and women are more likely to get a UTI with increasing age

## How Hiprex can help

Hiprex contains an effective anti-bacterial agent to help suppress or eliminate bacteria in the urine that causes UTI.

Hiprex works best in an acidic environment and should not be used in conjunction with urinary alkalinizers as the effectiveness of Hiprex may be impaired.

## How will I know if Hiprex is suitable for me?

UTI can show itself in different ways. Speak to your healthcare professional to see if Hiprex is suitable.
